

LexSetu

AI-Powered Legal Intelligence &
Drafting Platform for India

Grounded in 1,840+ Verified Indian Legal Sources

— Built for Lawyers, Law Students & Litigants —

Why General-Purpose AI Is Dangerous for Legal Practice

Generic AI models, whilst powerful, pose significant risks when applied to the precision and high stakes of legal work.

Risk of Hallucinations

General AI can generate plausible but factually incorrect legal information, leading to unreliable advice.

Lack of Specificity

They struggle with the nuanced interpretations and specific context required by Indian legal frameworks.

Data Confidentiality

Using public models risks exposing sensitive client data and violating privacy regulations.

Ethical & Bias Concerns

Unchecked AI can perpetuate biases present in its training data, compromising fairness and justice.

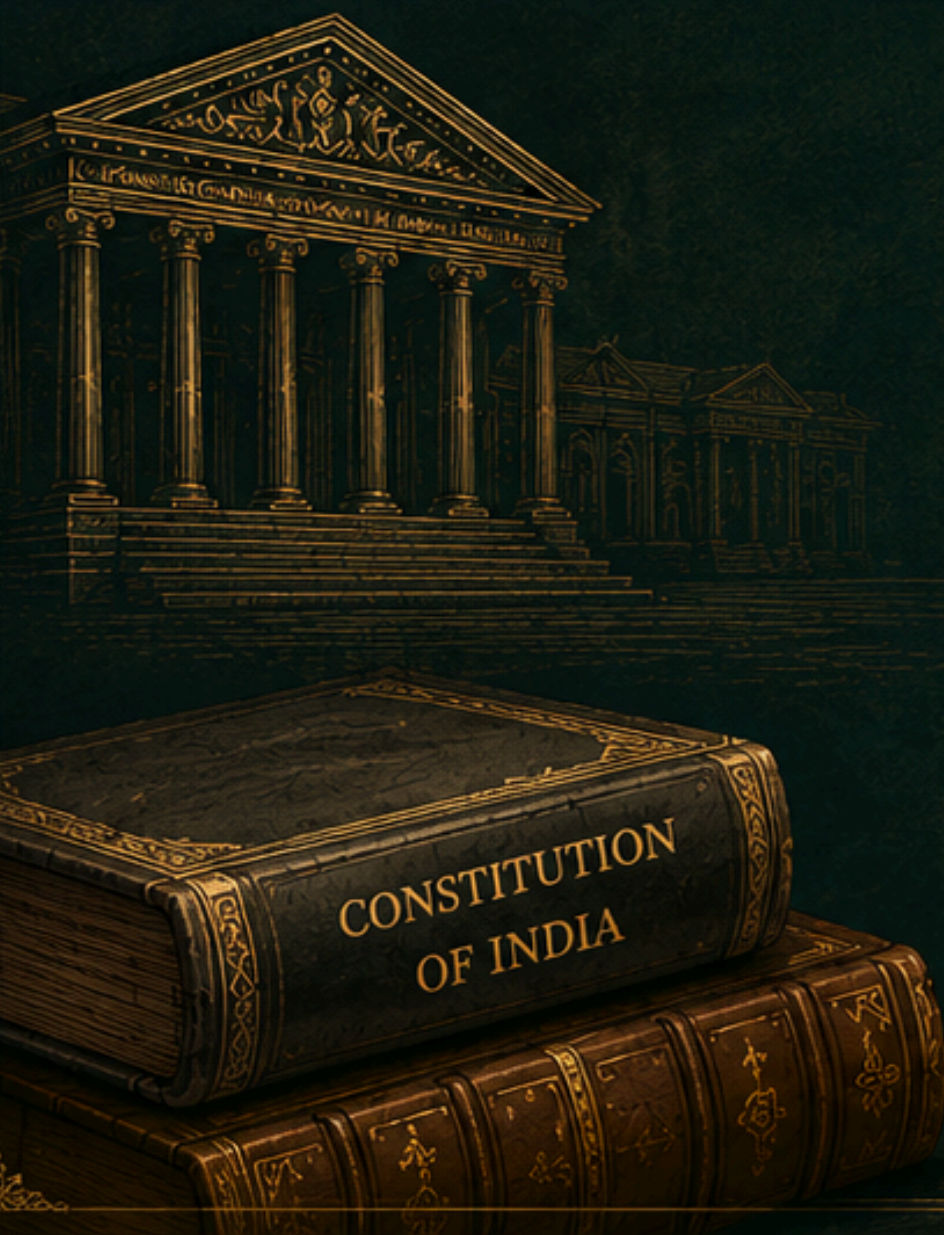

LexSetu: A Closed-Loop Legal Intelligence System

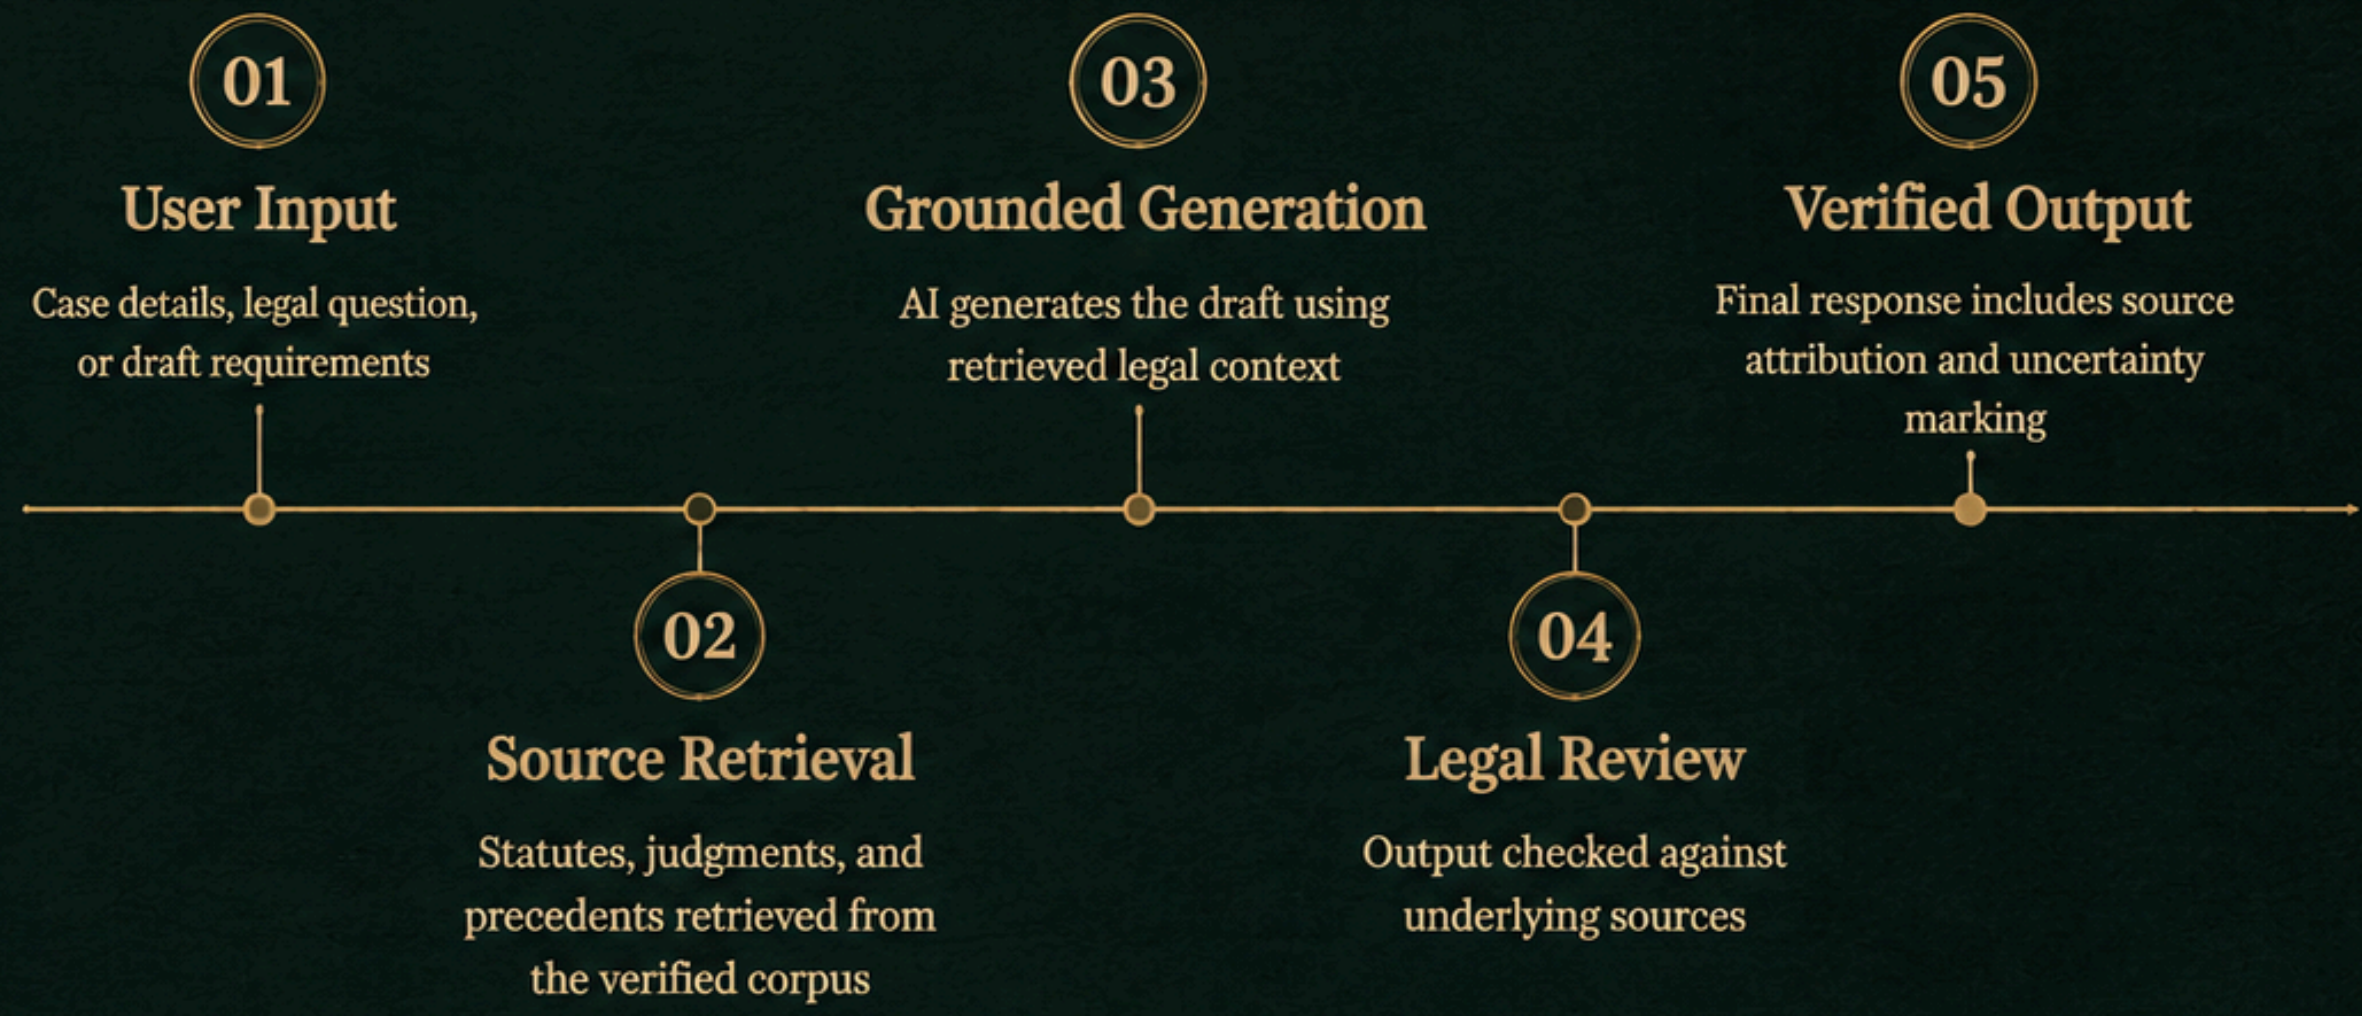

Instead of generating legal content from assumptions, LexSetu grounds every response in retrieved legal sources. When information cannot be verified, it is explicitly marked as [Not Provided] rather than guessed or fabricated.

1,840+ Verified Indian Legal Source Documents form the foundation of every LexSetu response.

How LexSetu Grounds Every Answer

Source-Grounded

Answers generated using retrieved Indian legal sources

Verification Loop

Outputs pass through review and correction before delivery

[Not Provided]

Unverifiable information is explicitly marked, not invented

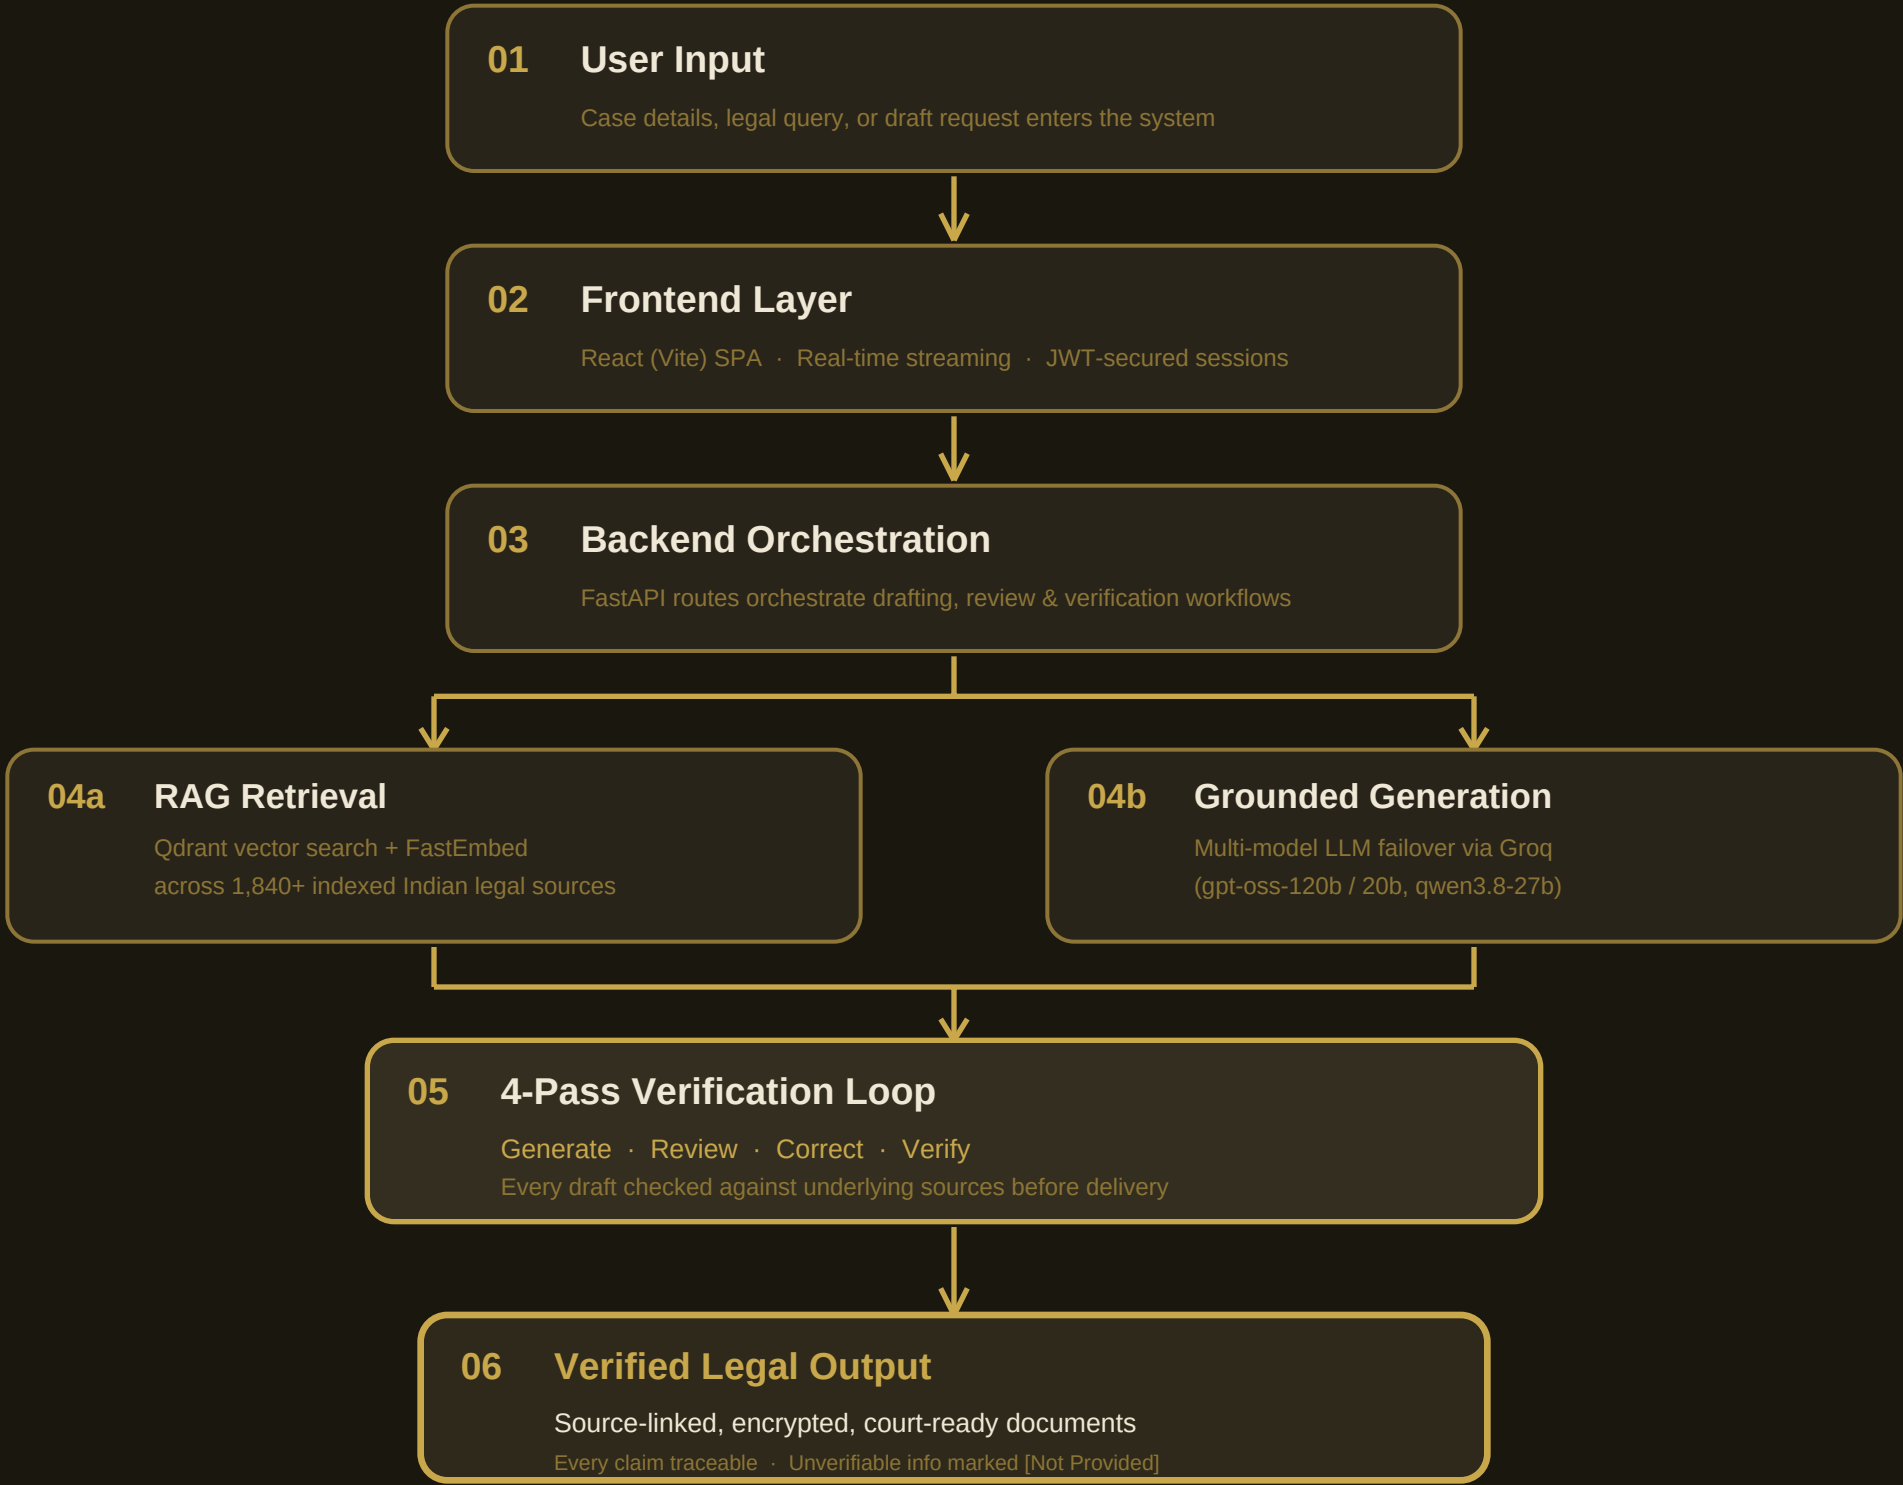

Source Attribution

References connected to underlying legal authority

How LexSetu Is Built · Under the Hood

A retrieval-grounded, multi-model architecture engineered for accuracy, resilience, and Indian legal specificity.

Security & Infrastructure

- AES-256 encrypted logging
- JWT session control
- Automatic API failover & monitoring
- DPDP Act 2023 & Bar Council aligned

IMPACT

- 60% faster legal drafting
- Zero hallucination architecture
- 1,840+ verified source documents
- Court-ready output in minutes

Built Around the People Who Practice Law

Authoritative, source-grounded support for legal work — from first draft to final review.

1

Lawyers

Reduce drafting time by up to 60% with verified, source-grounded outputs. Court filings, legal notices, contracts, legal opinions, compliance documents.

2

Law Students & Researchers

Learn from verified legal templates and understand statutory frameworks faster. Moot courts, research, internships, exam preparation.

3

Law Firms & Legal Departments

Standardise output quality and identify errors before client delivery. Contract review, M&A due diligence, compliance, litigation support.

4

Self-Represented Litigants

Guided assistance and accessible court-ready document formats. Consumer complaints, RTI applications, tenant disputes, simple court filings.

WHY CHOOSE US

Built on Trust — Confidentiality, Transparency, Accountability

Every design decision optimizes for what a lawyer must be able to verify before it reaches a client or a court.

Data Confidentiality

End-to-end encryption. No client document ever trains our models.
DPDP Act 2023 & Bar Council aligned.

Full Transparency

Every claim is source-linked. Unverifiable information is marked
[Not Provided], never guessed.

India-Specific Accuracy

Updated to BNS, BNSS & BSA (2024) — not the repealed
CrPC/IPC/IEA general AI still cites.

Human-in-the-Loop Verification

A 4-pass closed loop reviews and corrects every draft before it ever
reaches you.

Multi-Model Reliability

Automatic failover across models, plus an offline fallback — no
single point of failure.

Fair, Transparent Pricing

Credit-based plans, no hidden fees, no per-token billing surprises,
cancel anytime.

One Platform, Every Scale — From Individual Lawyers to Enterprise Legal Systems

A layered, credit-based model designed to scale from a single litigant to a national legal department.

Individual Lawyers & Litigants

Pay-as-you-grow credit subscriptions — Free, Starter, Pro.

Law Firms & Legal Departments

Team plans with seat-based licensing and shared credit pools.

Enterprises & Corporates

API access and white-label integration for in-house legal & compliance.

Government & Judiciary Systems

e-Courts integration and bulk compliance licensing for public legal infra.

FREE vs PREMIUM — WHAT YOU GET

Feature	Free	Premium
Monthly credits	500	5,000 – 30,000+
AI-grounded drafting	Yes	Yes
Citation verification	Limited	Full 4-pass
Regulatory tracking (SEBI/RBI/MCA)	No	Yes
Team collaboration & shared credits	No	Yes
API & white-label access	No	Enterprise
Priority support	No	Yes
Dedicated account manager	No	Enterprise

REVENUE STREAMS: credit subscriptions · seat-based team licensing · enterprise API & white-label · government/judiciary contracts

Transparent. Fair. Built for Indian Legal Practice.

LexSetu’s pricing is based on actual AI inference cost + compute overhead + fair margin — packaged into simple monthly credit plans.

1. AI MODEL COST (PAY-AS-SERVED)

We use a multi-model failover system. You pay for the model that actually serves your request.

Model (via Groq)	Input (per 1M tokens)	Output (per 1M tokens)
openai/gpt-oss-20b	\$0.075	\$0.30
openai/gpt-oss-120b	\$0.15	\$0.60
qwen/qwen3.8-27b	\$0.80	\$4.00
Ollama (Offline Fallback)	Local Compute	Local Compute

Models are routed by task complexity for optimal cost & quality.

2. 4-PASS DRAFTING PIPELINE

Every user draft goes through our 4-pass quality pipeline.

1	Generate	Create initial draft based on your input and retrieved legal context.
2	Review	Critically review for completeness, legal accuracy & clarity.
3	Correct	Fix errors, strengthen arguments and improve structure.
4	Verify	Final legal verification against trusted Indian legal sources.

Multiple LLM calls across passes & models ensure high-quality, reliable outputs.

3. COMPUTE & INFRA OVERHEAD

Beyond LLM cost, every query uses our secure, high-performance infrastructure.

- Vector Search (Qdrant)
- Embeddings (FastEmbed)
- Encrypted Logging (SQLite + AES-256)
- API Orchestration & Failover
- Monitoring, Backups & Security

Flat compute & infra cost is added per query before margin calculation.

4. MARGIN & PRICING

A fair margin is added to cover product development, support, and sustainability.

AI Model Cost (Actual) + Compute Overhead (Flat/Query) + Margin = Credit Deducted

All costs are wrapped into monthly credit packs so you never see raw per-token billing.

WHAT IS A CREDIT?

1 Credit = 1 Unit of Work (varies by model & task complexity)

Higher model usage or longer drafts consume more credits.

NO SURPRISES

- ✓ No hidden fees
- ✓ No per-token billing shown
- ✓ Cancel anytime

CREDIT PACKS (EXAMPLE)

Plan	Price (INR)	Credits / Month	Ideal For
Free	₹0	500 Credits	Students & Self-Represented Litigants
Starter	₹999	5,000 Credits	Individual Lawyers
Pro	₹2,499	15,000 Credits	Small Law Firms
Team	₹4,999	30,000 Credits	Growing Teams & Practices

Exact credit cost varies by model, length & complexity. You can always preview credit usage before generating.

“Fair pricing. No surprises. Powerful legal AI for everyone.”
